## Lacquers

We powder coat the steel in our products. Powder coating is a sustainable method. Unlike other methods, powder coating does not release any harmful substances and 100% of the pure raw material (paint powder) is used. Excess powder is extracted by the system and then reused. We offer a wide range of coating colours: 9 colours in our standard collection and 9 in the trend collection. The standard collection comprises the more neutral shades: white, light grey, dark grey and black (both satin and textured) and aluminium (satin only). With the trend colours, you can choose from dark and classic or a fresh, natural (pastel) look. The colours are infinitely combinable.

### Base coating colours

**10 White (SG)**  
NCS S0502 Y07R\*

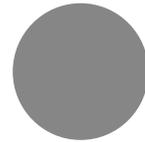

**09 White (STR)**  
NCS S0502 Y07R\*

**15 Light Grey (SG)**

### Tabletops and panels

Our preference is for sustainable and natural materials. All of the timber in our solutions comes from sustainably-managed forests. Our particle board consists of 100% recycled wood, some of which comes from our own factories. We test the board for emissions of volatile organic substances with potentially harmful effects. We aim to protect people from these both during production and during use. We are continuously innovating to develop completely emission-free sheet material.

## Fabrics

In our fabric collection, quality and sustainability come together. Our fabrics are carefully selected based on performance, versatility, aesthetics, and environmental impact. They meet the highest quality standards for maximum durability. We work closely with leading European suppliers to achieve this. Our goal: a range of fabrics made exclusively from monomaterials and recycled or renewable materials to enhance recyclability. Faux leather remains an exception due to the environmental impact of PVC. We continuously explore alternatives and recycling options. While we haven't yet found a replacement that meets the hygiene requirements in healthcare and education environments, we're committed to finding the right solution.

## Sustainable fabrics

These are the fabric types, a color selection is possible per fabric type.

For us, sustainable fabric goes beyond recycled yarn. When we select our fabrics, we examine the entire life and production cycle: How is the fabric produced? Where is it produced? What is the expected lifespan? What components are used? Is the recycled material traceable? Is it a mono-material that can be recycled at the end of its lifecycle? What is the environmental impact of production? When choosing our fabrics, we thoroughly investigate all these questions.

\* These fabrics contain recycled materials

## Screen fabric selection

Mono-backing

Our fabrics for panels and screens come with sustainable backing. This so-called mono-backing is a mono-material made of (recycled) polyester, attached to the fabric using 100% polyester adhesive. The outcome? The mono-backing is 100% recyclable, and the fabrics remain suitable for textile recycling at the end of their lifespan.
